Universitat
Pompeu Fabra
Barcelona

Fairness, Accountability, Transparency
and Ethics of Data Processing (FATE)

Programming Sessions

1. **6 Labs** = 3 Modules x 2 Sessions

2. **Deliverables per Module**

A zip file containing the notebook (worth 10 points) submitted through Aula Global

3. **Grading Policy**

<u>M1: Data Anonymization</u>	<u>(35%)</u>	<u>Submit by 11:59 PM, Feb 02, 2026</u>
-------------------------------	--------------	---

M2: Algorithmic Fairness I	(30%)	Submit by 11:59 PM, Feb 19, 2026
----------------------------	-------	----------------------------------

M3: Algorithmic Fairness II	(35%)	Submit by 11:59 PM, Mar 10, 2026
-----------------------------	-------	----------------------------------

4. **Queries / Discussion**

Please post on the Aula Global Forum for everyone's benefit.

5. **Solved Practices:** To be available after each deadline.

Note to Students

Slides and practices are made available on [git](#). You will also find a statement on AI usage and evaluation guidelines for notebook submissions.

Last year's practice notebooks are currently available on the repository

- While you may view future material, practice notebooks II and III are subject to change.
- A notebook's content will be finalized by the first day of the appropriate module.

Notebook Submissions

Make sure to include:

- Your name
- Your email
- The current date
- Your signed (printed) name at the bottom of the notebook declaring your work as your own.
 - You may work with others to discuss problems and prevent small mistakes, but **do not** copy the work of others.
 - If an AI tool(s) is used for assistance, it is **required** that you indicate which AI tool(s) and list the specific purpose(s) of usage.
 - Your work should primarily be your own.

Tips for Submission: Quality of Code

Follow good programming practice!!!

- Familiarize yourself with a coding style (PEP8).
- Avoid code duplication, follow the DRY (Don't Repeat Yourself) principle.
- Remove unnecessary code. If the code is in the notebook, it should serve a purpose.

See [github](#) for more detailed information

Tips for Submission: Quality of Code

Things I will be looking for when grading:

- Code comments! Explain what you are doing. Demonstrate you understand what methods you are calling and the underlying theory concepts.
- Meaningful variable names, please don't be vague.
- Use markdown cells when answering questions that require a written response, not code cells.
- **Take advantage of the pandas library.** Not only will this be good practice, pandas methods are optimized for large datasets.

Clarification

- Name: Identifier
 - If you were to only consider first or last name → Quasi-Identifier
- Telephone number: Identifier
 - If you were to anonymize the last x digits → Quasi-Identifier
